We recommend that the journal name is put in the subject field of the message's "envelope" information.

Frequency: Published monthly with additional issues in February, April, June, August, October and December

Subscription Information: Annual Institutional Subscription Rates 1995. North, Central and South America, U.S. $2093.00, Rest of World, £1316.00. Associated Personal Subscription Rates are available on request for those whose institutions are library subscribers. Sterling prices exclude VAT. Non-VAT registered customers in the European Community will be charged the appropriate VAT in addition to the price listed. Prices include postage and insurance and are subject to change without notice. Issued free to paid-up members of the International Society of Electrochemistry (ISE). Subscription enquiries from customers in North America should be sent to: Elsevier Science Inc., 660 White Plains Road, Tarrytown, NY 10591-5153, U.S.A. and from the Rest of the World to: Elsevier Science Ltd, The Boulevard, Langford Lane, Kidlington, Oxford OX5 1GB, U.K. Subscription rates for Japan are available on request.

Back Issues: Back issues of all previously published volumes are available direct from Elsevier Science Offices (Oxford and New York). Complete volumes and single issues can be purchased for 1990–1994. Earlier issues are available in high quality photo-duplicated copies as complete volumes only. Back volumes on microfilm are available from UMI, 300 North Zeeb Road, Ann Arbor, MI 48106, U.S.A.

I. Fonseca, M. I. S. Lopes, J. L. Santos and L. Proença — 2701 — Electro-oxidation of D-sorbitol on platinum in perchloric medium: a voltammetric study

K. Ogura, M. Kokura, J. Yano and H. Shiigi — 2707 — Spectroscopic and scanning tunneling microscopic characterization of virgin and recast films of electrochemically prepared poly(o-phenylenediamine)

S. H. Si, Y. J. Xu, L. H. Nie and S. Z. Yao — 2715 — Electrochemical quartz crystal microbalance study on electropolymerization of m-phenylenediamine: effects of aniline and polyaniline

M. Jakič, M. Kovač, M. Gaberšček and S. Pejovnik — 2723 — Influence of carbon black type on anode and cathode electrical properties in LI/$SOCl_2$ batteries

Y. Castrillejo, M. A. García, E. Barrado, P. Pasquier and G. Picard — 2731 — Chemical and electrochemical behaviour of indium ions in the $ZnCl_2$–2NaCl melt at 450°C

C. Coutanceau, A. El Hourch, P. Crouigneau, J. M. Leger and C. Lamy — 2739 — Conducting polymer electrodes modified by metal tetrasulfonated phthalocyanines: preparation and electrocatalytic behaviour towards dioxygen reduction in acid medium

J. V. Martin, M. Turmine, P. Letellier and P. Hemery — 2749 — Study of β-cyclodextrin/dodecyltrimethylammonium bromide complex into water-isopropanol mixtures

O. Bohnke, B. Vuillemin, C. Gabrielli, M. Keddam, H. Perrot, H. Takenouti and R. Torresi — 2755 — An electrochemical quartz crystal microbalance study of lithium insertion into thin films of tungsten trioxide. I. Modeling of the ionic insertion mechanism

O. Bohnke, B. Vuillemin, C. Gabrielli, M. Keddam and H. Perrot — 2765 — An electrochemical quartz crystal microbalance study of lithium insertion into thin films of tungsten trioxide. II. Experimental results and comparison with model calculations

J. Y. Becker, M.-Q. Shen and R. West — 2775 — Electrochemical oxidation of deca-*n*-propylcyclo-pentasilane $[(n\text{-}Pr)_2Si]_5$

F. Barba and B. Batanero — 2779 — Selective cathodic reduction of 3,7-diaryl-2H-imidazo[2,1-b][1,3,4]oxadiazines

Xiaodan Xi and Shaojun Dong — 2785 — Preparation of modified electrode with molybdophosphate anion and its electrocatalysis for bromate reduction

S. S. El Atrash and R. D. O'Neill — 2791 — Characterisation *in vitro* of a naphthoquinone-mediated glucose oxidase-modified carbon paste electrode designed for neurochemical analysis *in vivo*

Y. Kato, Y. Shimizu, L. Yijing, K. Unoura, H. Utsumi and T. Ogata — 2799 — Reversible half-wave potentials of reduction processes on nitroxide radicals

A. B. Velichenko, D. V. Girenko and F. I. Danilov — 2803 — Electrodeposition of lead dioxide at an Au electrode

I. Tabaković — 2809 — Anodic oxidation of enaminones

G. Barral, F. Njanjo-Eyoke and S. Maximovitch — 2815 — Characterisation of the passive layer and of hydroxide deposits of nickel by impedance spectroscopy

• BACK ISSUES OF •
THIS
JOURNAL

Back issues of this and all other Elsevier Science journals are available in hard copy. New subscribers to a journal may purchase back issues of that publication in hard copy edition at 25% discount off the standard price. Elsevier Science maintains stocks of back issues and orders may be placed with confidence at your nearest Elsevier Science office. Should any issue of a volume be temporarily out of stock at the time of ordering, a high quality photoduplicated copy will be supplied at no extra charge to complete your order.

SAVE UP TO 25% BY PURCHASING COMPLETE SETS
Customers wishing to purchase complete sets can do so at a saving of 25% off the individual volume price.

MICROFORM EDITIONS
Back issues in microform of Elsevier Science research journals are also available. For further information please apply to your nearest Elsevier Science office.

BACK ISSUES PRICE LIST
Full details of the rates of back issues of all Elsevier Science journals can be found in our Back Issues Price List. Please contact your nearest Elsevier Science office for a copy.

TALANTA

The International Journal of Pure and Applied Analytical Chemistry

Editors: **J.M. Kauffmann**, *Université Libre de Bruxelles, Institut de Pharmacie, Campus Plaine - CP 205/6, Boulevard du Triomphe, B-1050 Bruxelles, Belgium* and **E.H. Hansen**, *Department of Chemistry, The Technical University of Denmark, DK-2800, Lyngby, Denmark*

Audience: Analytical Chemists.

AIMS AND SCOPE

Talanta published monthly, provides a forum for the publication of original research papers, preliminary communications, and reviews in all branches of pure and applied analytical chemistry. Other features are analytical data (stability constants, etc.), and letters to the editors. Papers on fundamental studies and novel instrumentation developments are especially encouraged. Novel applications in areas such as clinical chemistry, environmental analysis, geochemistry, materials science and engineering, pharmaceutical and drug analysis, etc. are welcome. Since spectrophotometric measurements and applications are well established, studies in these areas should demonstrate a unique and substantial advantage over presently known systems (with respect to reagents or a particular application). *Talanta: Chemical Sensors* presents significant experimental and theoretical research results relevant to chemical sensing. This section has been created in recognition of the growing need to perform chemical analysis in situ with sensing devices. Contributions will be expected to be of the high standard set and maintained by *Talanta* and to make a definite and useful contribution to analytical chemistry.

PROGRESS IN SURFACE SCIENCE

Editor: **Sydney G. Davison**, *Applied Mathematics Department, University of Waterloo, Ontario, Canada N2L 3G1*
Managing Editor: **Prudence G. Davison**, *Applied Mathematics Department, University of Waterloo, Ontario, Canada N2L 3G1*

Audience: Surface Scientists, Materials Scientists.

AIMS AND SCOPE

Progress in Surface Science publishes review articles from invited authors of international stature and, on occasion, special issues devoted to conference proceedings, selected works and dedicated volumes. Because of the transdisciplinary nature of surface science, topics are chosen for their timeliness from across the wide spectrum of scientific and engineering subjects. By adopting such an all-embracing policy, the journal strives to promote the exchange of ideas between surface scientists in the various areas. Authors are encouraged to write articles that are of relevance and interest to both established surface scientists and newcomers in the field.
